DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I in the reply filed on 8/23/2010 is acknowledged. Therefore, claims 1-3 are examined on the merits.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admission of prior art in view of Akiyama et al (JP 10-021932).

Regarding claims 1 and 3, However, from the applicant's prior art admission, it is known that the anode includes a porous sintered body, which contains B-doped ceria is expressed by the formula of Ce_{1-m} B_m O₂ (B is one or more of Sm, Gd, Y, and Ca, and 0<m≤0.4) and nickel. Further, it is known that nickel of the porous sintered body including B-doped ceria and nickel forms a porous frame structure constituting a network [paragraph 0005]. Applicant claims that it is not known to attach the cerium dioxide on the surface of the porous nickel frame. However, Akiyama discloses a fuel electrode (anode) of a fuel cell comprising cerium dioxide deposited (separately attached) on the porous nickel skeleton (network frame structure). Akiyama further teaches that by making the ceramic particles deposit inside metal particles simultaneously with the surface of the metal particles which constitute the fuel electrode, metaled condensation and the depressor effect of sintering are improved remarkably [Fig. 3-4; paragraph 0010 – 0020]. Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to avail the teachings of depositing (separately attaching) cerium dioxide on the nickel surface in the fuel cell assembly as taught by Akiyama in order to have efficient anode for the fuel cell.

Regarding claim 2, Akiyama teaches that the ceramic particles have average particle diameter of 0.01 to 0.5 micrometer [paragraph 0018]. Therefore, the claimed large and small particle size falls within the disclosed particle diameter by Akiyama.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MUHAMMAD SIDDIQUEE whose telephone number is (571) 270-3719. The examiner can normally be reached on Monday-Thursday, 7:30 am to 4:00 pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
